DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-25, drawn to a method of operating a radio station in a broadcast network, classified in class 455, subclass 423.
 - II. Claims 26-44, drawn to a highway advisory radio system, classified in class 455, subclass 90.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, invention II is different because it has digital audio electronics and an amplitude modulating transmitter and invention I is detecting a fault condition and reporting the fault to a broadcast network.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
